Art Unit: 1791

1.Applicant's election without traverse of Group II, claims 8-14 in the reply filed on March 31, 2008 is acknowledged.

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 8, 9, 11 and 14 are rejected under 35 U.S.C. 102(b) as being anticipated by Japanese Kokai 63-002,002.

Japanese Kokai -002 discloses the instant process of producing a reflective member for a surface light source by supplying a curved metal-aluminum—part which has been made by molding into the curved shape and then forming a white coating film on the surface of the metal part. Since the white pigment is in a resin suspension, it is submitted that the white coating film is a liquid.

- 3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claim 13 is rejected under 35 U.S.C. 103(a) as being unpatentable over Japanese Kokai 63-002,002.

Kokai -002 discloses the basic claimed process as set forth in paragraph 2, supra, the applied reference lacking the aspect of employing a powder coating. It is conventional to coat using either powder coatings or liquid solutions and the use of

Page 3

either in lieu of the other is submitted to be prime facie obvious dependent on the vehicle employed for the pigment.

4.Claims 10 and 12 are rejected under 35 U.S.C. 103(a) as being unpatentable over Japanese Kokai 63-002,002 in view of Japanese document 2002-172,735.

Japanese Kokai -002 discloses the basic claimed process as set forth in paragraph 2, supra, the primary reference essentially failing to teach that the film thickness is from 50-300 microns and the instant ratio as set forth in claim 12. Japanese -735 teaches making a similar reflecting member wherein the member has a white pigment reflective surface coated to a thickness of 60-400 microns. It is submitted that the exact thickness of the coating would have been within the skill level of the art and an obvious parameter to make larger in the process of the primary reference dependent on the degree of reflectivity desired. Also, it is submitted that the ratio as se forth in instant claim 12 would have been an obvious design parameter dependent on degree of reflectivity desired for the curved surface.

5. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Mathieu D. Vargot whose telephone number is 571 272-1211. The examiner can normally be reached on Mon-Fri from 9 to 6.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Christina Johnson, can be reached on 571 272-1176. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
